PROSTAGLANDINS D2 (RANDOM URINE)

SPECIMEN TYPE/CONTAINER:

Urine/Cup

No Historical Data

PGD2 (RANDOM URINE)

Reference Range: <175 ng/g Creatinine

No Historical Data

This test has not been cleared or approved by the US Food and Drug Administration.

This test was developed and its performance characteristics determined by Inter Science Institute. Values obtained with different methods, laboratories, or kits cannot be used interchangeably with the results on this report. The results cannot be interpreted as absolute evidence of the presence or absence of malignant disease.

HOUSE ACCOUNT TRACKING

TRACKING HOUSE ACCOUNT

We were unable to identify an account number for the order submitted. If you do not have a Quest Diagnostics account number or if your account information needs to be updated please call 1-866-MYQUEST (866-697-8378) for assistance.

To prevent delays in testing and processing of your orders please provide the following information for this order and with every additional order submitted:
Quest account number and account name
Client address
Client phone and fax number
NPI number of ordering physician along with the physician name.

TRYPTASE

TRYPTASE

Reference Range: <11.0 mcg/L

HISTAMINE, PLASMA

HISTAMINE, PLASMA**<1.5**

Reference Range: < OR = 1.8ng/mL

This test was performed using a kit that has not been cleared or approved by the FDA. The analytical performance characteristics of this test have been determined by Quest Diagnostics Nichols Institute San Juan Capistrano. This test should not be used for diagnosis without confirmation by other medically established means.

CHROMOGRANIN A, LC/MS/MS**CHROMOGRANIN A, LC/MS/MS****<50**

Reference Range: ADULTS: <311 ng/mL

No Historical Data

The sample type for this test was serum.

Interpretation of patient results may be affected by a variety of conditions such as hypertension, gastritis, prostate cancer, hyperparathyroidism, and most commonly renal disease and use of proton pump inhibitors (PPIs). (Vezzosi D, et al. Chromogranin A measurement in metastatic well-differentiated gastroenteropancreatic neuroendocrine carcinoma: screening for false positives and a prospective follow-up study. Int J Biol Markers. 2011 Apr-Jun;26(2):94-101.)

This test was performed using a Liquid Chromatography Mass Spectrometry method. Values obtained from different assay methods cannot be used interchangeably. Chromogranin A levels, regardless of value, should not be interpreted as absolute evidence of the presence or absence of disease.

This test was developed and its analytical performance characteristics have been determined by Quest Diagnostics. It has not been cleared or approved by the FDA. This assay has been validated pursuant to the CLIA regulations and is used for clinical purposes.
