Test Name	Results	Reference Range	Lab
ANA Scr, IFA, rfl Titr/Patt			EZ
ANA Screen, IFA	NEGATIVE	NEGATIVE	
ANA IFA is a first line screen for detecting the presence of up to approximately 150 autoantibodies in various autoimmune diseases. A negative ANA IFA result suggests an ANA-associated autoimmune disease is not present at this time, but is not definitive. If there is high clinical suspicion for Sjogren's syndrome, testing for anti-SS-A/Ro antibody should be considered. Anti-Jo-1 antibody should be considered for clinically suspected inflammatory myopathies.
