THYROGLOBULIN ANTIBODIES	<2	Reference Range: < OR = 2 IU/mL
The cutoff value of < or = 2 IU/mL represents the lower limit of quantification (LOQ) established by the assay manufacturer (Beckman Coulter). While very low levels of TgAb may not be clinically significant, any measurable TgAb above LOQ has the potential for interference with Thyroglobulin assay. The manufacturer of the assay found that 96% of the participants in a healthy population (no evidence of thyroid or autoimmune disease) had TgAb levels below 4 IU/mL. => REVISED: Change in test result(s) PLEASE DISREGARD PREVIOUSLY REPORTED INFORMATION BELOW: (The information below was originally reported on 03/19/2026 at 6:24 PM) THYROGLOBULIN ANTIBODIES TNP/317 TEST NOT PERFORMED Duplicate test.
